

Rapid Access Vitreal Injection Guide

- ◀ Designed to shorten cycle time for intravitreal injection
- ◀ Designed to reduce patient discomfort
- ◀ Precise location of injection site
- ◀ Angled flanges eliminate speculum and caliper
- ◀ Titanium, autoclavable, and durable

Gold color for better contrast with injection needle

Extended flange designed to keep lids and lashes away

Precise injection site location

Notches show alternative injection sites

Angled for visibility

Precise edges for accurate placement

V7911

"In a limited quality assessment survey, pain scores on a scale of 0-10 (ten being worst pain imaginable) were between 0-2 for the RAVI Guide[™], 0-5 for the eyelid speculum, and 0-6 for the needle insertion portion of the procedure."

-Dennis Han, MD, Retina Specialist
