OPTOMED

Optomed Workstation

Optomed Workstation software is a comprehensive Patient Data Management solution for image viewing, sharing, and archiving. Full DICOM and PACS compliance ensures seamless interoperability with hospital networks. With Optomed Workstation software you can view, analyze and compare retinal images with one simple graphical interface.

Key benefits and features

- » Simple, fast and easy setup and saving of patient report with images
- » Efficient data viewing, analyzing and archiving
- » Complete tools for diagnostic purposes including zoom, lens and color filtering
- » Together with Smartscope M5 hand-held fundus camera the Optomed Workstation software complements your user experience
- » Supports image transfer from Smartscope M5 via Wi-Fi or USB
- » Images and studies can be stored locally and can be sent directly to the DICOM compatible system (PACS or other) of the hospital network
- » Comparison capability – up to 9 simultaneous images can be displayed on the screen
- » Image magnifying for more detailed analysis of retina

Supported operating systems: Windows Vista, Windows 7, Windows 8
