

# Chang Hydrodissection Cannula

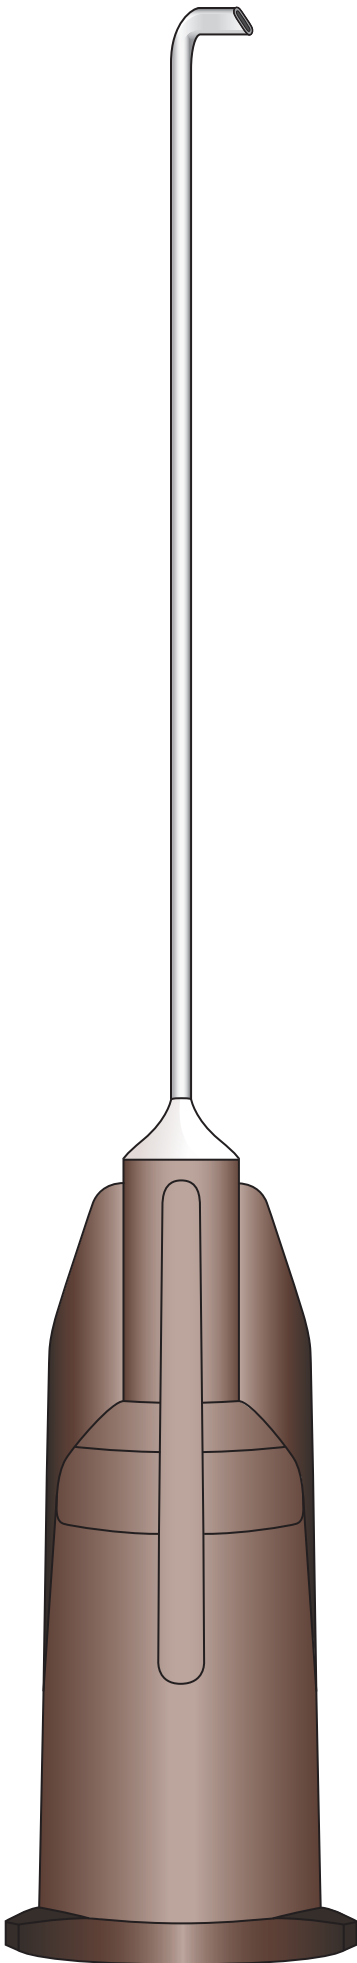

10 Per Box

REF	Description
113-01	27GA x 1" (25mm) 1.5mm Flat Beveled Tip 90° Angled

The Chang Hydrodissection Cannula is designed with a flat beveled tip, angled 90°. This allows adequate hydrodissection by introducing a fan of fluid between the capsular bag and nucleus. The blunt beveled point on the distal end is used to Hydrodelineate and rotate the nucleus to confirm separation.

Chang Hydrodissection Cannula

Eagle Products are "Made in USA" and intended for "Single-Use" only. Cannulae are provided "Sterile" in individual packaging.
